

DISC BRAKE PADS

**VALUE
FOR MONEY**

The Benefits

- Premium quality
- Latest technology formulations
- Longer wear life and resistance to heat
- Smooth braking performance
- Quiet operation with minimal dust

Value for Money

Prima Disc Brakes Pads comes with specially designed formulation; hence able to last longer and eventually provide greater savings.

Bedding-In Procedures

After fitting new brake pads, it is necessary to bed-in and condition the material surfaces correctly with the following procedure:

1. Accelerate the vehicle to 60km/h
2. Using light to moderate pedal effort, reduce speed to 10km/h
3. Repeat 1 & 2 at least 10 times allowing 400m between cycles

DO NOT make repeated brake applications in quick succession or drive with brakes continuously applied during bed-in. This may lead to over-heating causing loss of braking efficiency, poor pedal feel and possible noise.
